A PROBLEM-DRIVEN COMPANY

We don't build software. We solve problems worth solving.

Every challenge is different. We partner with organizations to uncover root causes, engineer practical solutions, and create measurable impact through technology, automation, AI, data, and innovation.

Let's Solve It

Custom Solutions

01 • ABOUT THE FIRM

Technology follows understanding.

Meyers exists to solve meaningful problems — not to ship software. We start every engagement with curiosity: what is actually broken, who does it hurt, and what would change if it were fixed?

Only once the problem is understood do we choose the tools. Sometimes that means an AI system. Sometimes an integration, a redesigned process, or a single automation that removes a thousand hours of manual work. The technology is never the goal — the outcome is.

Problem

Agnostic

Impact

02 • PROBLEM VS. SYMPTOM

Start with the symptom. We'll find the cause.

Open any challenge to see how we approach it.

Growing too fast?

Customer requests the system faster.

Manual work consuming valuable time?

Costs too much before getting value.

Disconnected systems?

Integration is a data conflict problem.

Poor decision-making from scattered data?

Disparate files, dashboards, reports.

Need it but don't know where to begin?

Find the one workflow worth it.

Operational bottlenecks?

The constant need. Reduce it.

Low productivity?

Usually symptoms, not a people issue.

Legacy systems slowing innovation?

Investment in legacy, not big things.

Difficulty scaling?

Scale the model, not just the system.

03 • WHY THE FIRM

Five habits behind every engagement.

01

Think before building

The first deliverable is a strategic question, not a tactical plan.

02

Technology-agnostic

No black box. The problem guides the tools.

03

Engineering excellence

Tested, observable, documentable systems that answer their authors.

04

Long-term partnerships

Why stay long enough to see what it actually worked.

05

Outcome-driven delivery

Success is a number agreed up front, then measured.

04 • INDUSTRIES

Different industries. Same philosophy.

The vocabulary changes. The method doesn't. Understand the context, fix the constraint, engineer the scaled solution that moves from unique.

Logistics

Construction

05 • THE APPROACH

Six moves, in order. Every time.

01

Understand

Listen to the people doing the work. Separate symptoms from causes before anything is proposed.

02

Discover

Study data, systems, and complaints. Quantify the cost of the problem in the organization's own terms.

03

Design

Shape the unified solution that changes the outcome, with the trade-offs written down.

04

Build

Engineer in short sprints with production-grade quality tested and measurable from day one.

05

Measure

Compare against the baseline agreed at the start. No blame, no claim of impact.

06

Improve

Feed what we learn back into the system. Solve problems and describe maintenance.

Ready to solve something meaningful?

Let's start with the problem.

Let's Solve It

Magora

We can't build faster. We solve problems worth solving.
